

INTERACTIVE LOGIC MODELS: using design and technology to explore the effects of dynamic situations on program logic

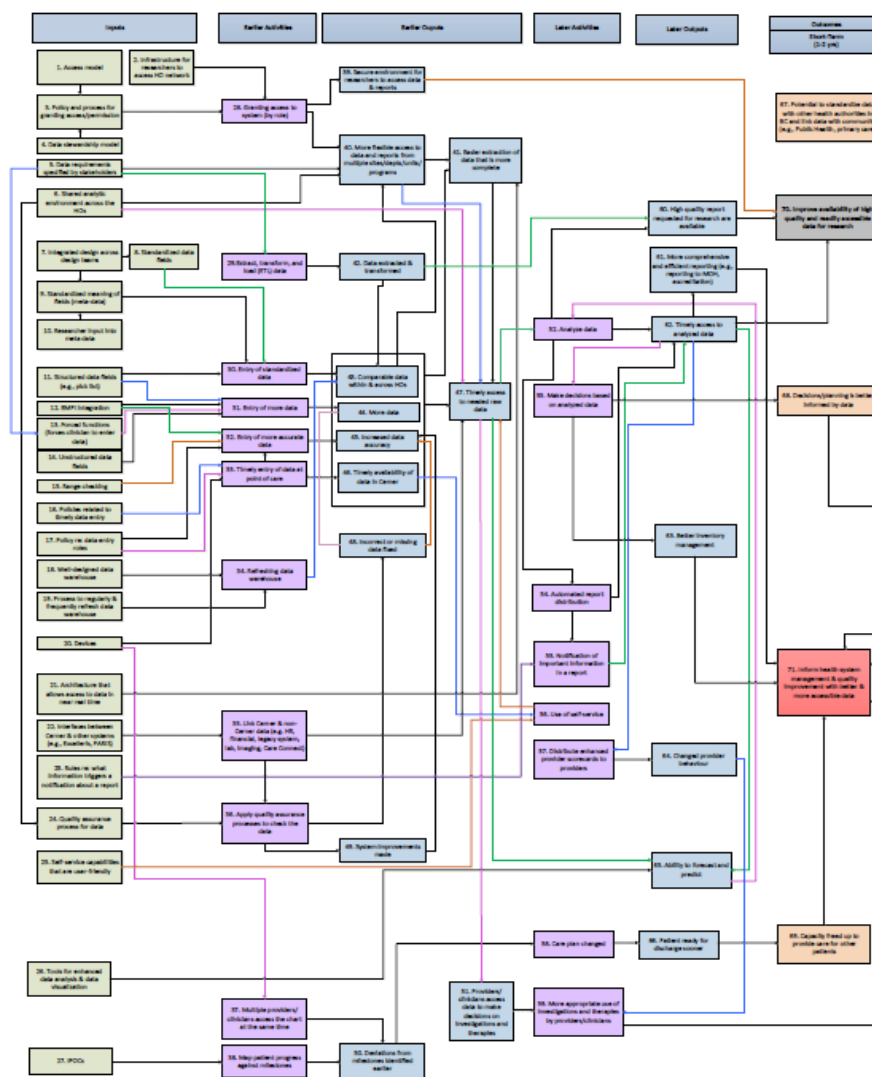

M. Elizabeth Snow, PhD, MBA, CE, Program Evaluation Lead

Centre for Health Evaluation and Outcome Sciences (CHÉOS), Vancouver, BC, Canada

Nancy Snow, MDes, AGIA, Assistant Professor

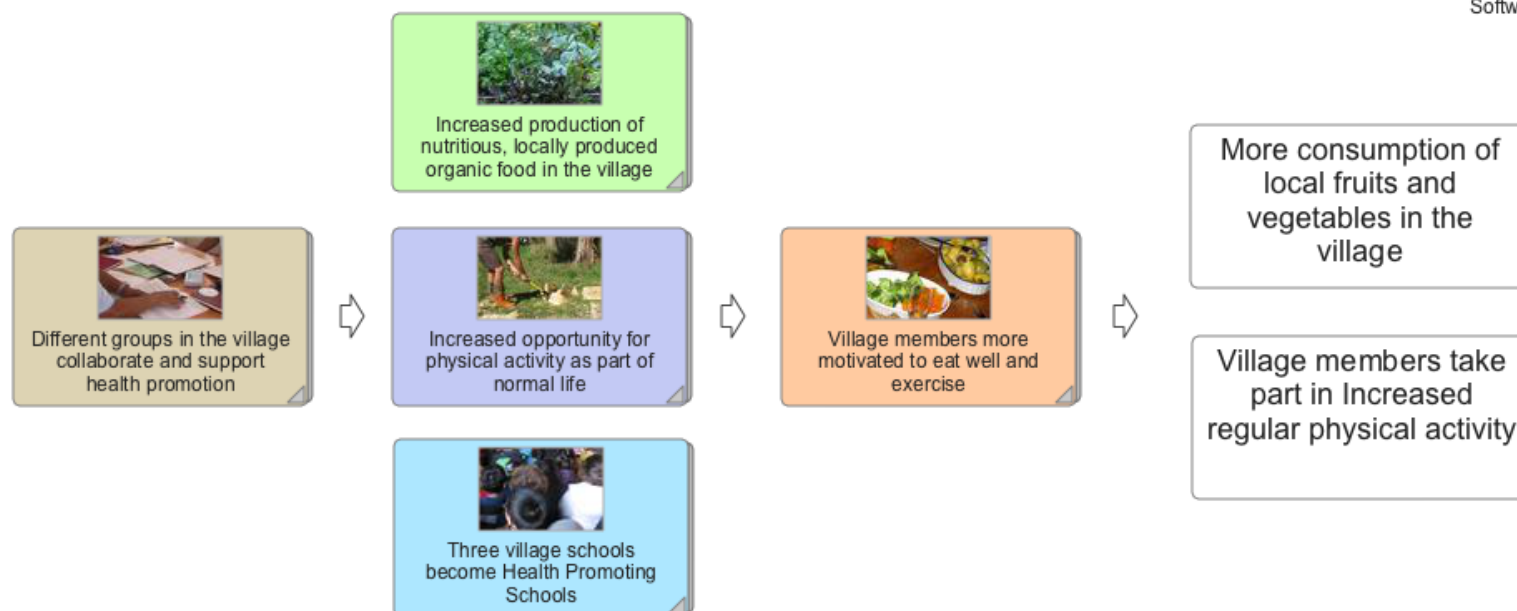

Ontario College of Art & Design University (OCADU), Toronto, ON, Canada

How we came up with this idea...

[Usability Help](#)

Full View: This shows your entire logic model—from the statement of the problem to the outcomes your program is designed to bring about. Once completed, this will serve as an invaluable communications tool and can form the framework of a detailed program plan for staff to implement their tasks. It will also act as the basis for evaluating your program using the Evaluation Plan Builder.

[Evaluation Help](#)

[Tips](#)

Example—Full View: The full view should include all of the components of your logic model: statement of the problem, goal(s), rationales, assumptions, timeframe, resources, activity groups, activities, outputs, and short-, intermediate and long-term outcomes.

Problem / Goals

Problem Statement [Usability Help](#)

Unplanned pregnancies and STIs

Comment - Add	When/Who	Action
-- No Comments Available --		

Goals [Usability Help](#)

- a. Reduce unplanned pregnancies
- b. Reduce sexually transmitted infection rates

Comment - Add	When/Who	Action
-- No Comments Available --		

Rationale / Assumptions

Rationales [Usability Help](#)

- a. Providing youth with birth control will reduce unplanned pregnancies

Assumptions [Usability Help](#)

- a. Youth do not have easy access to birth control

Problem Statement

Unplanned pregnancies and STIs

Logic Model Diagram: Youth Clinic Logic Model

Goal

Reduce unplanned pregnancies

Long-Term Outcomes

decreased rate of unplanned pregnancies

Rationales

Providing youth with birth control will reduce unplanned pregnancies

Providing youth with condoms will help to reduce STI rates

Assumptions

Youth do not have easy access to birth control

Youth do not have easy access to condoms

Resources

public health nurses

birth control pills

condoms

clinic facilities

Activity Groups

Clinic Services

Outputs

increased access to birth control pills
increased access to condoms
increased knowledge and skills related to condom use
increased knowledge and skills related to birth control pill use
increased detection and treatment of STIs

Intermediate-Term Outcomes

decreased rates of STIs

Short-Term Outcomes

increased use of birth control pills

increased use of condoms

Problem Statement

- Teenage pregnancies and STIs

[details +](#)

Assumptions

- Birth control is not easily available to youth in the region

[details +](#)

Goal

- To reduce teenage pregnancy rates and STI rates

[details +](#)

Indicators

- STI rates

[details +](#)

Outcomes

- Reduced STI rates
- Reduced teenage pregnancy rates

[details +](#)

Community Served

- health region

[details +](#)

Theory of change

- Youth Clinics

[details +](#)

Strategies

- Distribute free birth control
- Distribute free condoms

New Resource: Clearing the fog: new tools for improving the credibility of impact claims

This IIED Briefing Paper shows that the methods of [process tracing](#) and Bayesian updating can facilitate a dialogue between theory and evidence that allows for the assessing of the degree of confidence in 'contribution claims' in a transparent and replicable way. [Read it here.](#)

New Resource: Theory Maker

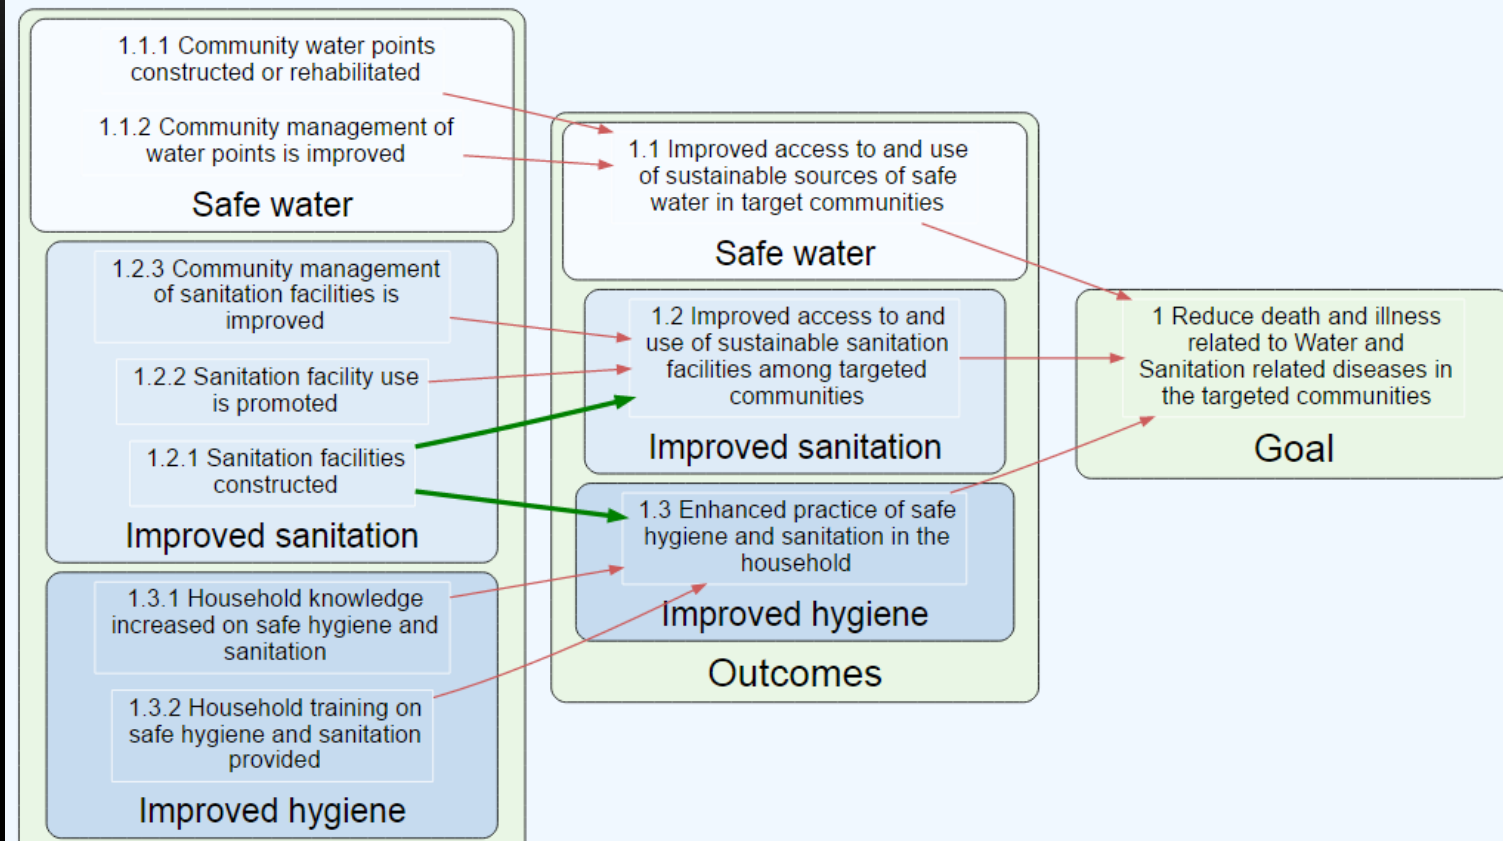

[Theory Maker](#) is a free and open source online tool for mapping out program theory. For more information on creating logic models and some other tools and methods, you can also have a read of Patricia Rogers' blog, [Q&A about drawing logic models](#).

Upcoming events

Visit our [Events Page](#) to find upcoming workshops in May and June with the Australasian Evaluation Society. Or hop online and register for the third and final [Blue Marble Evaluators webinar](#) on May the 18th (free).

Logframe - one output has multiple outcomes

```
--Goal
1 Reduce death and illness related to Water and Sanitation related di

--Outcomes

---Safe water
1.1 Improved access to and use of sustainable sources of safe water in

---Improved sanitation
1.2 Improved access to and use of sustainable sanitation facilities am

---Improved hygiene
1.3 Enhanced practice of safe hygiene and sanitation in the household

--Outputs

---Safe water
1.1.1 Community water points constructed or rehabilitated
1.1.2 Community management of water points is improved

---Improved sanitation
1.2.1 Sanitation facilities constructed >> 1.3
1.2.2 Sanitation facility use is promoted
1.2.3 Community management of sanitation facilities is improved

---Improved hygiene
1.3.1 Household knowledge increased on safe hygiene and sanitation
1.3.2 Household training on safe hygiene and sanitation provided

boxcolour=blue1 only Safe water
boxcolour=blue2 only Improved sanitation
boxcolour=blue3 only Improved hygiene
arrowcolour=green only 1.2.1
arrowwidth=4 only 1.2.1
proportion=.6

How do linear models address the complexity in which we work?

Mar 23, 2016 | 853 views |  15 Likes |  3 Comments |   

Ask [The Outcomes Guru™](#) - 'No outcomes question too simple or too hard'

Question

M&E and capacity building specialist Lesley Williams ([Linkedin Profile](#)) asks:
How do linear models address the complexity in which we work?

Answer

Can I see
the project
logic model?

@clys4

Sure, do you
want the one
that's far too
detailed or the
one that's not
detailed enough?

freshspectrum.com

Developing the tool

- DYnamic
- LOgic
- MOdels

The logo for 'dylomo' features the word in a bold, lowercase, sans-serif font. Above the 'y' and below the 'o' are curved, dotted orange lines, each ending in a solid orange arrowhead pointing to the right.

Establishing requirements

Low-fidelity prototyping

High-fidelity prototyping

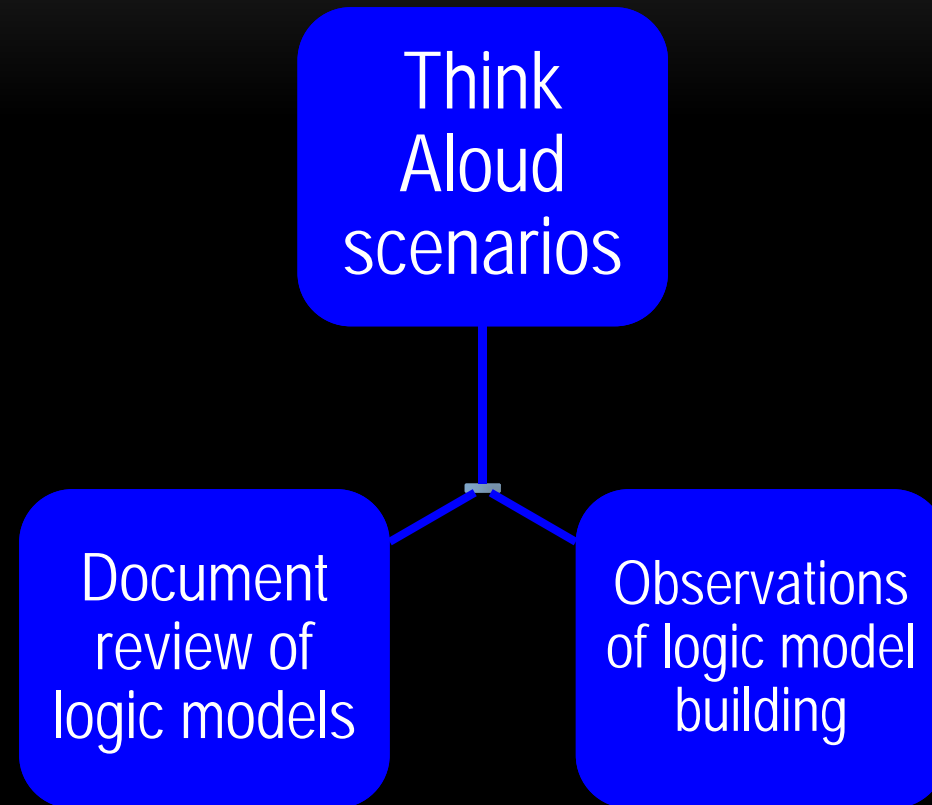

User testing with evaluators

Testing with evaluation
stakeholders

Establishing requirements

Requirements for Dylomo v. 1

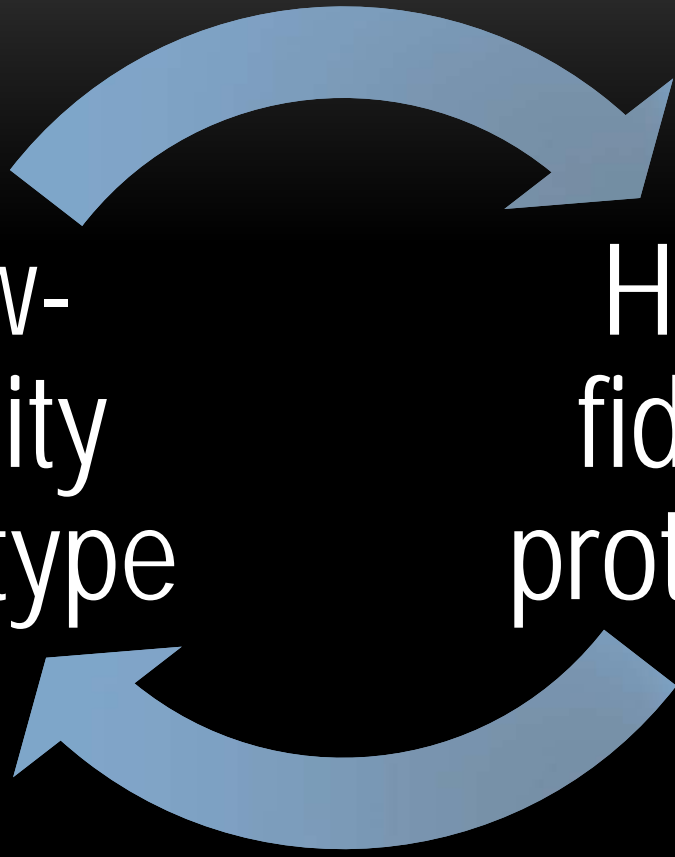

Includes
elements of a
logic model

Includes
relationships
among elements

Focus on
pathways of logic

But without losing
the overall
context of the
model

A way to visualize
what would be
lost if an element
is removed

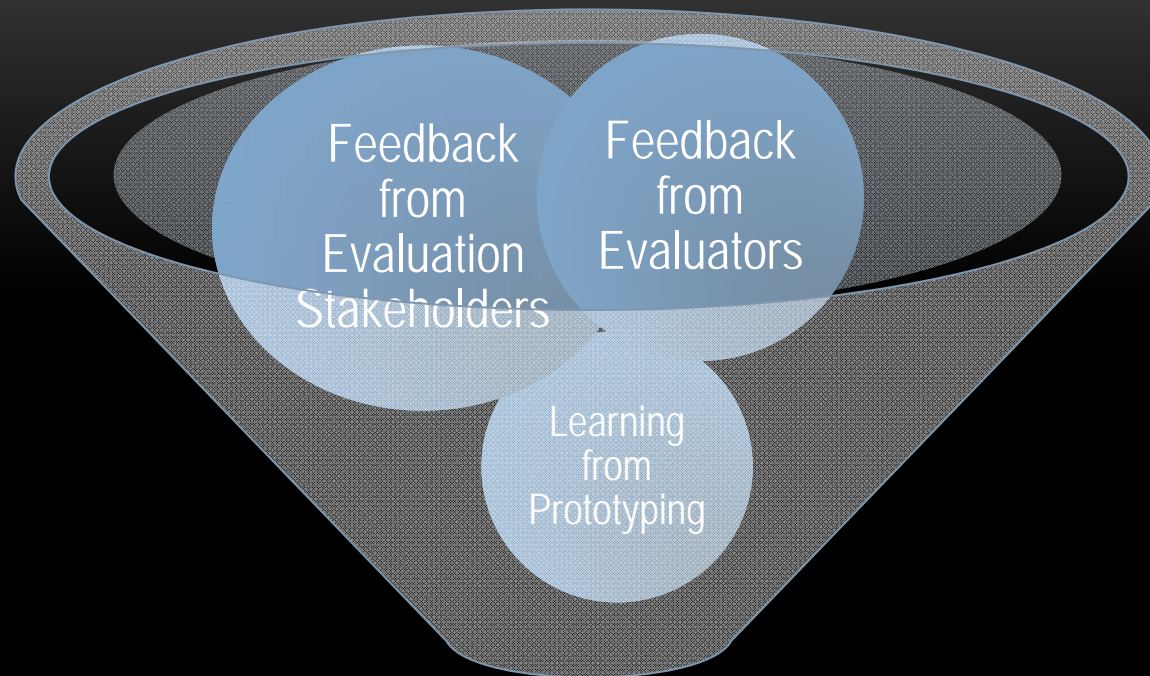

Low-
fidelity
prototype

High-
fidelity
prototype

User Testing
